	Hadeer	Nourhan	Noha	Yara	Hams
Thursday At the end of the day we will filter the network sections and filter the algorithm sodo codes	-download vs -search for network sections -Login php -sodo code of algorithm project 5 -1/2 video algo And 1/2 sheet algo Or choose one to be completed -choose something else to do if you have more time	-Send yara your page and tell her exactly what to do during saving -download vs -search for network sections -page front -sodo code of algorithm project 5 -get ready for the contest	-download vs -search for network sections -project os -sodo code of algorithm project 5 -1/2 video algo And 1/2 sheet algo Or choose one to be completed	-last task -sign-up page -sodo code of algorithm project 5 -1/2 video algo And 1/2 sheet algo Or choose one to be completed -simulation	-Send hadeer your page and tell her exactly what to do during saving -download vs -search for network sections -page front -sodo code of algorithm project 5 -get ready for the contest
Friday At the end of the day we will filter the ways of downloading the oppnet	-start studying network sections -search for how to download the oppnet -search for how to use the php in the idea of posting -4 videos os(Mohamed el sa3eed)	-start studying network sections -search for how to download the oppnet -4 videos os(Mohamed el sa3eed) -ask muhammed magde about the answer of the algo	-start studying network sections -search for how to download the oppnet -4 videos os(Mohamed el sa3eed) -project os ya noha!	-search for how to use the php in the idea of posting -4 videos os(Mohamed el sa3eed)	-start studying network sections -search for how to download the oppnet -4 videos os(Mohamed el sa3eed) -ask muhammed magde about the answer of the algo
Saturday At the end of the day we will discuss hanhabeb eh f task el os and	-complete network section studying -start the steps of the oppnet -php task of the	-complete network section studying -start the steps of the oppnet -finishing the front	-complete network section studying -start the steps of the oppnet -finishing the os	-php task of the new page ya yaryoory -4 videos os -watch another 2	-complete network section studying -start the steps of the oppnet -finishing the front

nourhan&hams will tell what happened with the algo project	new page ya dodo -2 videos os -watch another 2 videos os and complete what you have started in algo	b azn allah -2 videos os -watch another 2 videos os and complete what you have started in algo -1 or 2 pst problem	project b azn allahh -2 videos os -watch another 2 videos os and complete what you have started in algo	videos os and complete what you have started in algo -simulation	b azn allah -2 videos os -watch another 2 videos os and complete what you have started in algo -pst problem

Notes:

1-These tasks are for the next three days, anyone who will not make his task will pay **2 pounds per task**!

But note that: red is your tasks, you must do! Blue is optional, it's up to you..

The yellow highlighted task in day one is the most important! So I recommend to start with it!

2- Put in your concern that you are implementing the class diagram.

3-After three days, these things must be completed:

    -front end

    -project os

    -started downloading the oppnet

    -tried to understand the sections of network

-studied at least 4 videos os

-completed at least one video or sheet of algo

-started algo project

4-Remmember that yara works with nourhan, hadeer works with hams
